

```
[self login].then(^(){  
    // our login method wrapped an async task in a promise  
    return [API fetchData];  
}).then(^([NSArray *fetchData]){  
    // our API class wraps our API and returns promises  
    // fetchData returned a promise that resolves with an array of data  
    self.datasource = fetchData;  
    [self.tableView reloadData];  
}).catch(^([NSError *error]){  
    // any errors in any of the above promises land here  
    [[[UIAlertView alloc] initWithTitle:@"error"...] show];  
});
```
